STEP 7: Connect VGA Cable to CAR-PC Make sure that this connection is secure.

STEP 8 : Test unit to see if factory display Shows on the screen.

Select between the different sources to see, if unit shows different inputs.

Before you completely re-install the unit into the dash,

it is a good time to adjust the menu display settings.

(DVB-T)

(CAR PC)

**** Warnigs**

- **we are not responsible for any damages for misuse of the Interface.**

Be very careful to avoid any possible damages on the car.

Read the installation guide before start the installation.

- **Turn off all the power supplies while connection the LVDS Connector.**

It can damage the monitor and ccc if you try to connect the connectors while the KEY has placed ON.

***When the Interface does not operate, check the following point,**

1) The Interface does not show any operation?

A) Check all Power input for the Interface, (Fuse check included)

B) Change the remote control, (Check the remote control sensor using Mobil phone camera or Digital Camera, Press the remote control button and see the remote control sensor through the camera lens, if you don't get any flickering from the sensor, the remote is not working)

C) Check LVDS Cable,

Check if there's any disconnection the connector has connected properly.

2) It shows the original screen well, But it does not show any video sources that connected though the interface?

A) Go over the check point 1

B) Check the video out devices (DVDP, GAME, REAR VIEW CAMERA, etc.)

Check the Power and the Video Out of those devices
